

Esther Adekanmbi - Data Analyst Portfolio

This is a premium, hand-coded portfolio website designed specifically for Esther Adekanmbi, a Data Analyst. It is built using only HTML5, CSS3, and Vanilla JavaScript, adhering to a minimalist, editorial design philosophy.

How to Edit

The website is designed to be easily editable. Look for the `<!-- EDIT ME: ... -->` comments in the `index.html` file to find where to add your specific content.

1. Update Personal Information

Open `index.html` and locate the following sections to update your details:

- **Hero Section:** Update your professional portrait image source (``).
- **Skills Section:** Add descriptions for Excel, SQL, Python, and Power BI. Fill in the remaining two skill slots.
- **Featured Project Section:** Add the project name, problem description, tools used, insights, recommendation, and GitHub link.
- **Other Projects Section:** Add details for two additional projects, including images, names, descriptions, and tech tags.
- **Learning & Certificates Section:** Add details for three certificates, including name, issuer, and year.
- **Contact Section:** Update your LinkedIn and GitHub URLs.

2. Customize Styling (Optional)

The website uses CSS variables for easy customization. Open `style.css` and modify the variables in the `:root` selector to change the color palette.

- `--accent` : This is your primary accent color (currently set to Amber: `#F59E0B`).
- You can also adjust the dark mode variables if needed.

How to Deploy to GitHub Pages

Deploying this static website to GitHub Pages is straightforward:

1. Create a GitHub Repository:

- Go to [GitHub](#) and log in.
- Click the "+" icon in the top right corner and select "New repository".

- Name your repository (e.g., `esther-portfolio` or `yourusername.github.io`).
- Make it "Public".
- Do not initialize it with a README, .gitignore, or license (you already have the files).
- Click "Create repository".

2. Upload Your Files:

- On the repository page, click the "uploading an existing file" link.
- Drag and drop all the files from this project (`index.html` , `style.css` , `script.js` , `README.md` , and any images you added) into the upload area.
- Add a commit message (e.g., "Initial commit") and click "Commit changes".

3. Enable GitHub Pages:

- Go to the "Settings" tab of your repository.
- In the left sidebar, click on "Pages".
- Under "Build and deployment", select "Deploy from a branch".
- Under "Branch", select `main` (or `master`) and the `/ (root)` folder.
- Click "Save".

4. View Your Website:

- GitHub will start building your site. This may take a minute or two.
- Once complete, you will see a message at the top of the Pages settings saying "Your site is live at [URL]".
- Click the URL to view your live portfolio!

Technical Details

- **Responsive Design:** Mobile-first approach, ensuring the site looks great on all devices (360px to 1440px).
- **Features:** Smooth scrolling, active navigation highlighting, scroll reveal animations, and a Light/Dark mode toggle with `localStorage` persistence.
- **Performance:** Semantic HTML, optimized CSS, and vanilla JavaScript for fast loading times.
- **Accessibility:** Designed with WCAG AA contrast ratios in mind.

Designed and built with care.
